## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 18-22 and 63-70 are rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn in view of Chia et al and Barton et al (6,744,109). The description of the Glenn and Chia references is hereby incorporated by reference from the previous rejection. The Barton reference, which was cited earlier in the prosecution, is being applied again to this rejection, in view of applicants' amendments to the claims.

Applicants' have amended the claims to essentially require that the adhesive flow restriction area, which comprises at least one trench, is on the same surface of the die as the imaging elements. While the Chia reference does show trenches formed in the inactive side of the device that would serve to impede the adhesive flow, the reference to Barton is cited to provide an explicit showing of adhesive flow impeding "trenches" which may be formed on the active surface of the die, as well.

Specifically, as shown in FIG. 3A of Barton, adhesive flow barrier regions (330) are formed around the perimeter of the device. The proximity of these barrier regions to elements (320) serve to form a "trench" that would also serve to impede the flow of adhesive.

It is noted that the actual claim language requires only that the flow restriction area is formed on the surface of the die, and the claims do not define any specific structure for the trenches, nor do they require that the trench extend below the surface of the die.

In addition, as seen in FIG. 3B and FIG. 5 of Barton, plural trenches may be used to create a perimeter around the imaging elements, and extend from edge to edge on the die, as claimed.

Taken together, the cited references teach all of the claimed features of the invention. One skilled in the art would be motivated to combine these references in order to achieve superior adhesive flow restriction, as taught by the references.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
